Abstract (en)  
[origin: WO2004062450A1] A container (19) for a liquid or pasty product is provided with a dispensing device (20) comprising a cylindrical cap (21), mounted on a neck portion of the container, and a dosing pump (22, 23, 24), connected to said cap and comprising an approximately cylindrical pump housing (22), projecting in an axial direction from the cap (21) and having an outer diameter which is small as compared to that of the cap and, at one side thereof, provided with a backing plate (23) for an elastically compressible pressure bulb (24), said backing plate projecting in mutually opposite, approximately tangential directions from the pump housing (22). A holder for said container (19) comprises a supporting element (10) for the dispensing device (20), arranged to support the container (19) in a state in which it rests on the supporting element (10) by means of the dispensing device (20) and has said device turned in a downward direction. The supporting element (10) is arranged to hold the dispensing device (20) in a state in which it is firmly fixed thereto.
