Abstract (en)  
[origin: WO2004050197A1] The invention relates to a cross-country ski binding having a step-in mechanism, which comprises a spring-loaded slide (8) that can be displaced in the longitudinal direction of the ski. Said slide either blocks a detent mechanism, which is provided in the form of a catch (17), in the detent position or is provided with a blocking part, which is provided in the form of a detent mechanism, has a mouth-shaped opening for accommodating a ski boot tip pin, and which is provided with a step surface that slopes downward toward the ski tip. Two interspaced bearing cavities (28, 28'), which slightly protrude from a bearing body (26), serve to support the boot tip pin of the detent mechanism.
