Abstract (en)
[origin: WO2004056496A2] The invention relates to a method for forming functional layers on an inorganic or organic substrate, characterised in that
a) the inorganic or organic substrate is exposed to a low-temperature plasma, a corona discharge, an intense irradiation and/or a flame-treatment,
b) 1) at least one activatable initiator or 2) at least one activatable initiator and at least one ethylenically unsaturated compound in the form of melts, solutions, suspensions or emulsions is/are applied to the inorganic or organic substrate, whereby at least one function regulating group, which regulates the desired surface characteristics of the treated substrate, is incorporated into the activatable initiator and/or the ethylenically unsaturated compound and c) the coated substrate is heated and/or irradiated with electromagnetic waves to regulate the desired surface characteristics. The invention also relates to substrates coated according to said method and to the use of said substrates.
