Abstract (en)

[origin: WO2004055203A1] Disclosed is a method for the quantitative and/or qualitative identification of germs in a sample. Said method comprises step (a) in which the sample is prepared and step (b) in which the detection and/or evaluation takes place. At least one portion of the germs contained in the sample is marked by means of at least one fluorescent marker in step (a) while the quantitative and/or qualitative detection and/or evaluation is done by means of fluorescent reflection photometry in step (b). Also disclosed is a corresponding device for carrying out such a method.
