Abstract (en)

[origin: WO2004059001A2] The invention relates to a method for determining the homeostasis of human facial skin in vitro, to test kits and biochips for determining markers of human facial skin, in addition to the use of proteins, mRNA molecules or fragments of proteins or mRNA molecules as markers of human facial skin. The invention also relates to a test method for detecting the effectiveness of cosmetic or pharmaceutical active substances for treating human facial skin in addition to a screening method for identifying cosmetic or pharmaceutical active substances for treating human facial skin and to a method for producing a cosmetic or pharmaceutical preparation for treating human facial skin.
