Abstract (en)

[origin: WO2004055261A1] The present invention relates to a method for finishing woollen textiles. According to the method, the woollen textile in an aqueous solution is brought into contact with protease enzyme in a large amount of water so that the woollen textile is moved as little as possible or not at all, at a temperature of about 60°C or less for 10 to 90 min. The enzyme is inactivated and the woollen textile is taken to dry in mechanical drying at a temperature of about 60°C or less to reach residual moisture content of 10 to 45 %, and the final drying is carried out without mechanics.
