Abstract (en)

[origin: US2006000147A1] A method and device for closing sliding doors are presented. The device includes a U-shaped channel having a carriage disposed therein. The carriage includes a plurality of wheels and side and bottom bores. The bottom bore is adapted to receive a portion of a connecting element and the side bore is adapted to receive a portion of a bolt. An electromechanical unit partially expels the bolt into the side bore, thus locking the sliding door.
