Abstract (en)
   [origin: WO2004056030A2] The invention relates to a security module, personalising unit and to a method for their use. According to said method, the security module contains a secret key of a key pair for asymmetric encryption, the personalising unit generates a certificate using the public key of the key pair and transmits said certificate, together with the public key of a central system, to the security module. The latter uses the certificate and the public key to secure the communication with a central system, in particular in the field of banking.
