Abstract (en)
[origin: FR2849258A1] The plate (10) has a surface modified in an ordered way. Subplates (11, 12) are made by a material with a shape of a memory and joined one to the other with different coefficients of dilation. The subplates have surface modification movable units (25) which are constituted by blades (23) that are joined to the plate. A groove (14) liberates the blades which are present on a part of the blade perimeter. The blade has an initial position in an initial temperature and a final position in a final temperature.
