Abstract (en)

[origin: WO2004054042A1] The aim of the invention is to provide an electric plug-in connection of a sliding door to the door frame of a vehicle such that vibrations which may occur when the sliding door is closed can be compensated and a high degree of contact security can be ensured. The inventive electric plug-in connection, whose first contact part comprises a plug and a first housing and whose other contact part comprises a bushing and a second housing, is characterized in that the plug and/or the bushing are displaceably mounted in relation to the respective housing.
