Abstract (en)

[origin: EP1574433A1] The process involves moving positioning units (13, 14) vertically towards the top by driving a girdle (17) until a top engagement position of a thermo-sealed connection in a transfer and accumulation device (15). The device is moved horizontally along a single horizontal movement directed orthogonally with respect to the movement of the units (13, 14) to ensure picking up of a rollobag. An independent claim is also included for a device for formation and removal of a rollobag on a palletized unit load.
