Abstract (en)

[origin: EP1574490A1] The invention relates to a method of producing a substance for treatment of surfaces, a method of treating a surface and a substance for treatment of surfaces, comprising an aqueous solution product containing a jelly-like double sodium calcium silicate and produced by mixing together a first and a second aqueous solution, and, wherein said first aqueous solution contains calcium hydroxide in a quantity of water and a dissolving agent added to the water and wherein said second aqueous solution contains water and sodium silicate and characterized by separating the jelly-like double sodium calcium silicate from the aqueous solution product. The jelly-like double sodium calcium silicate will be mixed with demineralized water or any product that evaporates without leaving a deposit to become a waterproofing product in a concentration as needed.
