Abstract (en)

[origin: US2004112400A1] An applicator brush, preferably a mascara applicator brush, having enhanced bristle fibers is provided. The applicator brush has a brush core, and a number of bristle fibers preferably extending radially from the brush core. The bristles are made of two or more materials that are preferably coextruded together. The bristle fibers achieve performance characteristics such as antibacterial qualities, enhanced bristle surface structure, combing and loading characteristics. In this manner, enhanced application characteristics are achieved for the benefit of the user.
