Abstract (en)

[origin: WO2004054425A1] The aim of the invention is to provide a method and a dishwasher able to differentiate between a desired brief interruption of the drying phase and an actual termination of the partial drying section of the program. To this end, following an interruption of a partial drying section of the program, and once the program has been restarted, a parameter value is measured and compared with a pre-determined nominal value. If the measured parameter value deviates from the nominal value in a pre-determined manner, the selected program is set back to the beginning.
