Abstract (en)

[origin: WO2004058934A2] The invention relates to a method for producing transgenic plants and/or plant cells having an elevated vitamin E content, said transgenic plants and/or plant cells having a serine-acetyltransferase (SAT) content and/or activity which is modified in relation to the wild type, and/or a modified thiol compound content. The invention also relates to the use of nucleic acids coding for a SAT, for producing transgenic plants or plant cells having an elevated vitamin E content. The invention further relates to a method for producing vitamin E by cultivating transgenic plants or plant cells having a modified SAT content in relation to the wild type.
