Abstract (en)
[origin: WO2004055291A1] A sheet flashing member (100, 200, 300, 400) comprising a first sheet portion (110, 210, 310, 410) adapted to engage a surface of a first roof penetrating building structure, a second opposed sheet portion (120, 220, 320, 420) adapted to engage a surface of a second roof penetrating building structure, the first and second sheet portions forming a longitudinal gutter-like flashing member, the first sheet portion having opposed end portions, at least one end portion comprising a corner segment (111, 112) arranged substantially perpendicular to the general longitudinal orientation of the sheet flashing member. Separation means (230, 330, 430) is provided between the first and second sheet portions allowing them to be separated corresponding to a predetermined configuration. The invention further relates to a flashing assembly for forming such a flashing member and to a flashing kit comprising at least one such flashing member.
