Abstract (en)

[origin: WO2004034296A2] The invention concerns a computerized device for automatically identifying at least one batch of different articles in a plurality of articles previously purchased from a commercial organization, said purchased articles being recorded in the form of stored data. The data representing each batch definition are adapted to enable definition of at least one single digital list of element(s) capable of representing either one article which should be among the plurality of purchased articles, or a predetermined group of articles which should among the plurality of purchased articles, said group of articles being defined by stored data representing at least one property of the data representing the articles. The invention is particularly useful for awarding commercial advantages based on batches of purchased articles.
