Abstract (en)
[origin: WO2004057639A1] A fluorescent lamp comprising a lamp body (1) with a side wall (2) and a bottom wall (3) defining a chamber (6) in which there are housed the electronic components (7) for the operation of the lamp, an appendix (8) carrying electric contacts (9, 11) centrally extending from said bottom; and at least one fluorescent element (5) extending from a part of said body and a screw base (10) extending from the opposite part and surrounding said appendix, which projects axially beyond said screw base. The screw base (10) is inseparably, yet pivotally, fixed to said body (1), and means (19, 20, 22) are provided for making the screw base pivotally integral with the body, said means being activable when it is desired to screw the lamp into a respective lamp holder or remove it therefrom and deactivable to prevent unauthorized unscrewing.
