Abstract (en)

[origin: US2005206129A1] The invention relates to a sliding board, in particular a ski, the outsides of which have a running surface (2) and an upper cup (5), and which has a foam core (6) created by foaming during its manufacture and at least one guide element (8, 8', 8 ") with lateral profiles (9) for arranging and guiding of a binding element on the upper side of the sliding board, which guide element is connected to the sliding-board body by means of several anchoring elements (7, 7', 7 "). The guide element (8, 8', 8 ") is a plastic part with formed-on anchoring elements (7, 7', 7 "), which plastic part is manufactured in one piece, and by means of which anchoring elements the guide element (8, 8', 8 ") is bound during foaming of the core (6) into same and is held by the hardened foam.
