Abstract (en)
The sieving device has a frame unit which has at least one support means (3) for the mounting of a drum. The support means in a first position (5) are designed for the mounting of a drum of a first diameter (7) and in a second position for the mounting of a drum of a second diameter. The support means may be constructed for the mounting of at least three, four, or more drums with different diameters. The support means have at least two support elements (9) which are constructed preferably as rolling bodies (10).
