Abstract (en)

[origin: EP1577241A2] Marking unit (1) has a writer arrangement (2, 3) for marking (21, 22) a material web (20) that can be wound on to a winder core (11) using a winding arrangement (10) to form a roll (13). The marking unit has a signal generator (4) that is connected to the winder core and generates a clock signal (6) dependent on the rotation of the core. Based on the clock signal, the writer arrangement makes a marking on the material web. An independent claim is made for a method for marking a material web.
