Abstract (en)
A support for emergency lighting devices, comprising a plastic element which forms the main body (20), on which there are one or more housings (21, 22) for the fixing of a bracket (1) to a wall; said housings (21, 22) can be used as a centering mask during the drilling of the wall and their geometry allows the vertical and horizontal shifting of the bracket (1), in order to regulate its orientation. The correct positioning of the bracket (1) is obtained thanks to the use of a levelling bubble (14), suitable for determining the exact horizontal installation position of the bracket (1) and screen (13) of the emergency lighting device.
