Abstract (en)  
The cathode ray tube, comprising a front panel, a skirt and a funnel-shaped rear section, has a metal anti-implosion band (30) round the outside of the panel and at least partly covering the skirt. The two ends (31, 32) of the band, which can be cut at a right angle or chamfered, are joined together by laser welding. The weld is preferably effected from opposite sides of the band, i.e. the side in contact with the tube and the side opposite it.

Abstract (fr)  
Tube à rayons cathodiques comportant une ceinture anti-implosion 20 dont les extrémités 21 et 22 sont disposées bord à bord et solidarisées par soudure laser. Cette technique permet d'obtenir une ceinture anti-implosion d'épaisseur sensiblement constante autour du panneau avant du tube
