Abstract (en)

[origin: EP1578165A1] The system includes a first table (1) of a database including, for each one of a plurality of mobile telephone terminal types (TT1, TT2, TT3, TT4), provisioning indications (piS1, piS2, piS3) relating to services supported by the terminal type. When the subscriber changes to a certain terminal type, the system detects this (for example, from the IMEI of the terminal), and provisions the subscriber for certain services according to the provisioning indications. The invention also refers to a method for carrying out the provisioning.
