Abstract (en)
[origin: WO03059119A2] A personal table is provided having a tabletop supported by a support assembly. The tabletop is preferably constructed from blow-molded plastic and the support assembly preferably includes a first leg and a second leg that are pivotally connected. The legs desirably have a generally X-shaped configuration when the legs are placed in an upright position and the legs can be collapsed into a storage position. Each of the legs may include a lower portion, a body portion and an upper portion that is preferably selectively connected to the tabletop. The legs, for example, can be connected to the tabletop by inserting the upper portions of the legs into leg receiving recess formed in the tabletop. The leg receiving recesses are preferably integrally formed in the bottom surface of the tabletop as part of a one-piece construction. Desirably, a plurality of leg receiving recesses are formed in the bottom surface of the table top and the legs can be selectively attached to the leg receiving recesses in order to vary the height of the table.
