Abstract (en)

The invention provides a method as well as a device (2) for assembling a transmission chain (54) comprising sets (40), each of two elongated elements (42,44) which lie with their long sides against each other and are coupled in pairs to each other by link plates (46) with openings of which chain one supports the sets (40) in accommodating holes (30) formed in a support, whereafter two adjacent sets (40) of elements (42,44) are coupled together by placing a link plate (46) on them. The device comprises a supporting assembling body with holes (30) for two adjacent longitudinal elements, each hole having a depth less than the element's length.
