Abstract (en)
[origin: EP1579992A1] The press has at least one inking mechanism. This provides ink for application to the surface of material to be printed, being transported in the printing press. The amount of ink applied in the transverse direction in adjacent sirens can be controlled by at least one setting drive, controlled by a control device, which alters the setting of the amount of ink to be applied, depending on the alteration made in another zone.
