Abstract (en)

The bellows (2) of a passageway (1) between the carriage bodies of two interconnected vehicles has at least one encompassing frame (10) which has elements for shock absorbing which effect a defined folding of the frame. The bellows on one end has a flanged edge (4,5) upon which is fitted the shock absorbing frame. The frame has side walls (11) orientated in the longitudinal direction of the bellows and provided with a crease.

Abstract (de)

Gegenstand der Erfindung ist ein Balg (2) eines Übergangs (1) zwischen den Wagenkästen zweier z. B. durch eine Kuppelstange miteinander verbundener Fahrzeuge, wobei der Balg (1) mindestens einen stoßabsorbierenden insbesondere umlaufenden Rahmen (10) aufweist. <IMAGE>
