Abstract (en)

[origin: EP1580117A2] The filling process involves reporting an intended volume for filling the starter tube (2) with effector (4), then reporting an intended filling the amount for fluid (10) and filling the effector-start tube up to a vent (34), out of which the fluid flows. The event is then closed and the remaining intended filling amount fills the tube, as a leveling body (8) expands.
