Abstract (en)

[origin: EP1580153A1] The device has a transfer system (30) comprising suction heads (32, 32') for inputting an excess article (20) which forms a limit for a group of articles to be transferred. The heads are adapted to create a suction pull to pile the article (20) against them. A pusher (42) has a protrusion (48) that separates the article (20) to form an isolated group which is transferred to an area, where the pusher is movable in translation. An independent claim is also included for a method for transferring a group of articles.
