Abstract (en)

[origin: DE102004007083B3] Actuating device (10) comprises a locking element (30) having an arm pivoting towards a spar (20) in the radial direction. The arm interacts with a shoulder (21) in the locking position. Preferred Features: The arm is located on the side of a support facing the inside of the door. The locking element has two spreading and/or compressible arms (31) which move between a locking and releasing position. Both arms are formed from the sides of a U-shaped loop (40).
