Abstract (en)

A door lock is proposed, including a housing (1) installed in a door, a deadbolt mechanism (3) mounted in the housing, a latch mechanism (5) actuated by the deadbolt mechanism, and a doorknob mechanism (9). The doorknob can be pressed to actuate the doorknob mechanism (9) and transfer the force to the deadbolt mechanism (3) and the latch mechanism (5), allowing the deadbolt mechanism to actuate the latch mechanism so as to quickly unlatch the door lock and simultaneously open the door.
