Abstract (en)
[origin: EP1580362A1] The door and window have a lateral limitation (11) situated in a direction of opening of a sliding panel (7). A controllable interlock (26) is provided between the panel and limitation in an overlap region. The interlock has interlocking units (27, 28) that move in a locking or unlocking condition, and overlap on one another in the locking condition, under relative movement in a direction transverse to a main plane of the panel.
