Abstract (en)
[origin: EP1580371A2] The assembly has a locking bar (3) and a gear bar (4) coupled with one another through coupling sections (18, 19) of the respective bars. The coupling sections (18, 19) are adjustable between a disengaging position and a coupling position. The coupling sections are held against tampering by a retaining unit in their tampered position. The section (19) is formed in a single piece with the locking bar to cover an opening e.g. long hole. The pushing of the gear against the retaining unit is cut off by shifting the gear bar.
