Abstract (en)

A door or window structure with frame made in a box-shaped metal section bar (2) and with a handle (10) for actuating an actuation mechanism comprising at least one transmission rod (12) and transmission bars (14) and angle bars (13) connected to locking devices (16) and possibly tilt-and-turn (15) devices, a housing being defined along one side of the section bar for attachment of a panel (3), such as a pane of glass. A channel (4) runs along the opposite side of the section bar and an internal grooved housing (4a) and an external grooved housing (4b) are formed within the channel. The housings (4a, 4b) are defined by two fins (5,6) projecting inwardly one towards the other from the side walls of the channel, the actuation mechanism being housed in the internal and external grooved housings.
