Abstract (en)

[origin: US2004124206A1] A stacked paper product dispensing cartridge includes a plurality of walls including side walls and at least one end wall. The side walls and end wall define an interior area that contains stacked paper products oriented so as to extend substantially perpendicular to at least one of the side walls. The cartridge further includes a bulk dispensing opening defined within at least one of the side walls. The cartridge may further include at least one limited-access dispensing opening. The cartridge may further include removable sections defined in the cartridge walls, removal of at least a portion of the removable portions creating openings in the cartridge. Additional openings could be provided for controlling the dispensing and alignment of the paper products within the cartridge.
