Abstract (en)

[origin: WO2004024563A1] The invention relates to a method, a device, and a bag roll for preparing and packing hazardous substances. The preparation of hazardous substances for clinical and pharmaceutical fields is carried out in safety workbenches (1) comprising a low-pressure working chamber which is shielded by a front pane (2) comprising an opening (3) for an arm and through which purified air flows in a laminar manner. A container is filled with the substances in said working chamber. The contents of said container and the waste are separated into second containers (6). In order to facilitate the supply, preparation, closing and transport of said second containers, they are embodied as bags (6) which are pulled off a bag roll (10) in the form of a bag strip (6a), and are opened by pulling a flap (18) located on the bags (6), in such a way that the bag opening (19) faces the working opening (3) and the passage (5), and the bags (6) are filled, then closed, separated from the bag strip (6a) and supplied to a collecting basin (20).
