Abstract (en)

[origin: WO2004050506A1] The invention relates to a package for goods as well as a temperature indicator (3) intended for the same, including a contrast medium contained between a front wall (9) and a base wall, which medium has a certain colour in a first temperature state and which on transition to another temperature state is irreversibly converted to a different colour. A bar-code (6) is integrated in the front wall (9), which bar-code comprises a plurality of code bars in the form of transparent, window-like fields (7), which are surrounded by neutral, opaque fields, which have the same colour as the colour that appears in the code bar fields in the first temperature state. The contrast medium is arranged to alter the contrasting effect between the code bar fields and the surrounding fields on a possible of a decided temperature value in order to form or make visible the initially invisible bar-code. The invention also relates to a method for marking a package.
