Abstract (en)
[origin: WO2004063696A2] The apparatus for testing or measuring a continuous textile elongated material, comprises at least two test arrangements (1, 2), each test arrangement comprising at least a module for measuring the linear density of a test specimen and a mass measurement module. The apparatus further comprises feeding means (5, 14) for independently feeding test specimens to the two test arrangements, and a signal processor and/or controller (6) for evaluating signals from the modules of both test arrangements.
