Abstract (en)

[origin: EP1582129A1] The device has heating modules (1) spaced from one with respect to the other and supported by a vertical hollow upright (8). Each module has a heating body placed in a cover (2) having an inlet passage (6) for cold air and an outlet passage (7) for air reheated by the body. The passage (7) communicates with an opening formed in the upright. An outlet opening (11) is formed in the upright for evacuating the hot air from the upright. An independent claim is also included for utilization of a heating device for warming a towel and drying a laundry.
