Abstract (en)  
The board has a glide board corpus having a running surface coating with steel edges on one bottom side. The steel edges form an edge area for an edge grip and are located on one long side of the glide board corpus where in a section, between ends of the glide board corpus, one of the steel edges is set back by an amount (x) in relation to one plane or level (N) of a running surface formed by a running surface coating to a top of the snow glide board. On both long sides of the glide board corpus, the respective steel edge and its edge area are set back from the level of the gliding surface in a direction toward the top of the glide board corpus.

Abstract (de)  
Die Erfindung bezieht sich auf eine neuartige Ausbildung eines Schneegleitbretts, insbesondere Snowboard, mit einem Gleitbrettkörper, der an einer Unterseite einen Laufflächenbelag mit Stahlkanten aufweist, die einen Kantenbereich für einen Kanteneingriff bilden und jeweils an einer Längsseite des Gleitbrettkörpers vorgesehen sind. <IMAGE>
