Abstract (en)

[origin: EP1582479A1] As indicated in the heading, the present invention has the object of a damping device, especially conceived for refuse container lids, specifically for large containers provided with two lids (1,1') for access therein, of independent use by the users. These lids incorporate a flattened v-shaped groove (6), which can receive therein a gas cylinder (4), so that the cylinder is coupled to said lid by simply introducing the corresponding end of the former in the slot of the latter, in the absence of a pin or trunnion axis for the cylinder.
