Abstract (en)
A valley/flashing is proposed for flues. Preferably, the cross section of the present valley/flashing is an essentially circular cross section. The valley/flashing (1) is made of an elastic rubber material. The valley is a sole-piece element and shows a plurality of overlapped concentric rings (2). The rings show circular sectors (5) on which additional bands are attached, if necessary. The valley comprises borders that are placed on the said rings. The borders (8) are shaped in such a way as to insert in seats provided on the lower flashing.
