Abstract (en)

[origin: EP1582662A1] A lock (1) with tamper-resistant elements and associated key (1a), of the type that comprises a body (2), a receptacle (3), a cylinder (4) that can rotate in the receptacle (3), an actuation bit (5) that is rigidly coupled to the cylinder (4), a keyway (6) for the insertion of the key (1a), and a plurality of coding pins (8) and driver pins (9) that perform a radial translational motion. At least one of the coding pins (8) comprises a spindle (10) provided with a cylindrical head (11) and with a shank (12), which is likewise cylindrical and is provided with an end disk (13) whose diameter is comprised between the diameter of the shank (12) and the diameter of the head (11), the head (11) having a larger diameter than the shank (12), and by a cylindrical hollow pin (14), which has an outside diameter that is approximately equal to the diameter of the head (11) and a cylindrical internal cavity (15) whose diameter is approximately equal to the diameter of the disk (13) and is provided with a retention groove (16), the hollow pin (14) having a partially tapering tip (17).
