Abstract (en)

[origin: EP1582672A1] Corner deviation (7a) comprises an angular housing containing a displaceable drive-transfer element. A connecting rod-shaped locking element arranged on the housing and pivoting about a fixed pivot axis has a long arm and a short arm. The long arm has an engagement element that engages with a slip-in guide element attached to the window frame (2). On reaching a specified ventilation position and specified adjustment of the drive-transfer element, the short arm can be locked on the corner deviation against pivoting of the locking element about its pivot axis. An independent claim is also included for a central lock for installation in a concealed leaf frame (3).
