Abstract (en)

[origin: EP1582686A2] A plate-shaped surface panel (10) is held in a frame (2) by a metal holder (4) arranged between the frame and the panel. The holder is movable in a direction from the frame to the surface panel. When the surface panel is moved away from the frame, the panel is secured by the holder to the frame. A layer of intumescent material is arranged between the holder and frame, and expands when a threshold temperature is exceeded to press the holder against the surface panel.
