Abstract (en)
[origin: EP1582945A2] The clock piece has push buttons (9), and a control unit actuated by the button. A rotating bezel (10) that locks the buttons is arranged for permitting the buttons to occupy an axial unlocked position in which the buttons are pushed for actuating the unit, and an axial locked position in which the unit is not actuated. The locked position is closer to the interior of the piece than the unlocked position.
