Abstract (en)
[origin: WO2004050264A1] The invention relates to a method and an arrangement for sorting randomly distributed refuse sacks containing different types of refuse sorted at source. Each refuse sack has a predetermined means of identification (R, G, B, O, GR) for each type of refuse sorted at source. In the sorting, the refuse sacks are transported for them to be identified in successive sorting stations and separated so that refuse sacks containing a predetermined type of refuse are sorted out at the sorting station intended for this purpose. In the method according to the invention, in at least one sorting station (10a, 10b, 10c; 14a, 14b, 14c) refuse sacks containing another predetermined type of refuse (R, G, B, O, GR) and provided with associated means of identification are identified and separated.
