Abstract (en)

[origin: FR2849042A1] A composition comprising, by successive or simultaneous addition, the addition compound of an aliphatic isocyanate and an aromatic nitrogen heterocycle with five links, presenting a nitrogen-carbon-nitrogen sequence and substituted with one or more 1-10C and chains per heterocycle and one or more polyols. An Independent claim is included for a method of using the claimed composition by spreading a coat of the composition onto the substrate to be coated and heat treat the composition at 50-120degreesC and most preferably at 50- 100degreesC for at least half an hour and most preferably 2 hours.
