Abstract (en)

[origin: EP1584376A2] The coating application machine such as a painting robot has a supply line (5A, 5B) passing through the robot arm. Residual coating material from the atomizer (3) passes through a pinched hose unit (4A, 4B) to a scraper unit (6), from which it is scraped back into the coating material supply system. The hose is pinched by compressed air passed through a pressure resistant outer hose.
